TPA 1340 / TPA 2341   Drafting I & II

Logo Project

In this project we will be working on transition from a hand sketch into a drafted "thing". The idea is to quickly get ideas out on paper, edit and rework them as necessary both on-paper and digitally, and create a custom resource within VectorWorks for use later.

To begin:
Draw 3 or more 1½ inch squares on a sheet of paper.

Within those squares, sketch ideas that you might like to be your "logo" to be placed on CAD drawings.

Of the 3+ sketches select the strongest and develop it further in a new 1½ inch square.

Use a scanner or take a picture of your developed drawing, this will be imported into VectorWorks to be drawn over.

Digitally draw your logo in VectorWorks as closely as possible to your hand drawn logo. Please pay attention to your shapes and line weights.

We will then learn how to include your logo as a custom recourse in VectorWorks for later use.

Deliverables:
Turn in sketches, developed hand drawn logo, and a print (8½" x 11" paper) of your logo with appropriate title block.
